## 10 energy saving tips

1

Turn lights, appliances, and electronics off when they are not in use. Unplug idle power adapters and cell-phone

2

Replace at least five incandescent light bulbs with high-efficiency, compact fluorescent lamps (CFLs).

3

Install a programmable thermostat. In winter, lower the temperature when you are typically at work or asleep.

4

Change or clean filters in heating and cooling equipment. During peak times, change or clean filters monthly.

5

Use fans. You can raise summer air-conditioner settings by 3 - 5 degrees with no loss in comfort when using fans. Reverse blades in winter.

6

Control direct sunlight through windows. Use blinds, screens, awnings, vines, etc. in summer. In cold weather, the sun can bring warmth through windows.

7

Perform basic weatherization. Repair holes & cracks around pipe penetrations & under sinks; weather strip or caulk around doors & windows.

8

Check attic insulation. The recommended insulation level is R-38, or about 12 - 15 inches, depending on insulation type.

9

Don't over-dry your clothes. Running a typical dryer for 15 minutes less per load can save you up to \$35 per year. Remember to keep lint trap clean.

10

Unplug old refrigerators or freezers that are seldom used. These old appliances can add up to 15% to your electric bill.
